

GRASS SAVER PELLETS

Suitable for all horses that require a high protein feed to supplement pasture.

Grass Saver Pellets are high in protein and designed to be fed over winter when hay is the horse's main source of roughage, or during dry summer months when the nutritional value of the pasture is poor. During spring and autumn when grass is naturally higher in protein, Grass Saver should be fed bulked out with chaff or other high fibre feeds.

A high protein, medium energy maintenance feed, Grass Saver is based around the recognised cool feed material copra. This provides a quality ingredient that is high in both fat and fibre. Grass Saver Pellets include a full vitamin and trace mineral premix, and are an ideal supplement to be fed with hay.

Typical Analysis (Dry Matter Basis)
Crude Protein 18%

Ingredients Selected From

Copra Meal, Broll, Barley, Lime, Salt, Zeolite, Magnesium Oxide, Mycoguard, Vitamins and Trace Minerals

Feeding Recommendations

Winter/Summer - 2kg to a maximum of 4.5kg per day, fed with hay
Autumn/Spring - 1.5kg to a maximum 2.5kg per day, fed with chaff

Additional vitamin and mineral supplements are not recommended while feeding Grass Saver (except under a veterinarian's advice) due to the inclusion of a full horse vitamin and trace mineral premix in the pellets.

Available in 25kg bags

CAUTION!

Grass Saver Pellets are not suitable to feed to sheep, due to the high copper levels associated with the horse vitamin and trace mineral premix included in the feed.
